

# **GLOBAL WARMING/PLASTIC WASTE/CARBON FOOTPRINT.**

## **WILD ANGRY BIRDS CRYPTO**

In this paper, we will discuss the impacts of Global warming/ plastic waste/ Carbon footprint on the world and our society and how can we overcome this issue. We need to focus on this issue as this is undoubtedly one of the biggest threats to our world.

## Facts

Let's start with a fact about Global Warming, the sea levels have risen over almost 8 inches since 1870, and all this is due to Global warming. Another interesting piece of information about Global warming is that it was discovered by Physicist Eunice Newton Foote in 1856.

## Problem with Global warming

But why is Global warming such a big issue for us any and why do we need to deal with it? The answer to this question is quite simple and very complex at the same time. For an instant, the temperature is getting extrema and this is bad, quite simple, right! But on the other hand, it is affecting not only human life but also wildlife. The life of animals and especially wild animals and birds are affected tremendously due to global warming.  
When we loom around, we can see that this is affecting some parts of the world more than others. Germany and Japan are affected way more than Finland and Norway with global warming, but overall, the whole world is suffering due to this phenomenon. It is said that the first step in solving a problem is realizing that there is one. So, we have to realize, all of us! That global warming is a big problem.

## Our role in the problem

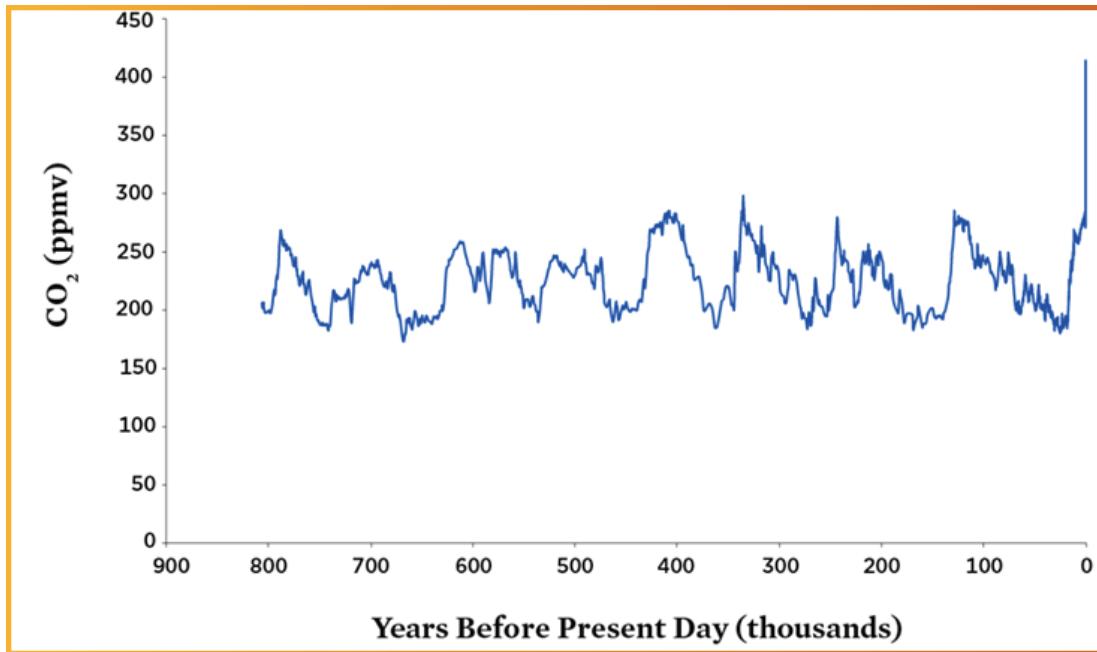

Now as it has been established, what we need to go through is, what part are we playing as Humans in this phenomenon. Honestly, there is a long list of it. Let's just quickly cover a few of them.

Humans breathe out CO<sub>2</sub> which is one of the main causes of global warming. Now as the population of the Human Race has risen dramatically over the past few years, we as a creature are the leading emitters of CO<sub>2</sub> in the whole world. There is no other creature/animal on the surface of earth who causes to emit more CO<sub>2</sub> than humans and has played a big role in global warming.

It is not a big thing that humans are causing Global warming, but now the problem has greater than ever, Waste spread by humans and other luxuries that we acquire in our day-to-day life is causing the issue to grow more and more.

To show how much of the issue we are causing below is a graph that shows the CO<sub>2</sub> present in the atmosphere over the years

As we can see that before, the CO<sub>2</sub> rate used to rise and fall in a certain range, but now CO<sub>2</sub> is rising at a huge rate, and we must do something about this.

Other than that, our vehicles are causing a lot of global warming. All vehicles that run on Gas, are causing to emit both Carbon Do-oxide and Carbon mono-oxide. We all know that CO<sub>2</sub> is dangerous, but Carbon mono-oxide is even more dangerous than it. This is causing the temperature to rise at an extreme rate. Many people can use public transport but they still prefer traveling in their cars. This adds more and more of these gases to the atmosphere.

On top of it, our industries are emitting so many gases in the atmosphere that it has led us to a point where we need to think and not only think but also act as soon as possible. But industries are an important part of our lives as well, so how can we even think of getting rid of them, well the answer is quite simple, we do not. We just need to make sure that we use the best material possible and follow the instructions of the government and other local and international authorities. That way the rate at which air pollution we are spreading can be brought way lower.

## The issue with Paper money:

Paper money has its downsides. For example, A \$5 bill typically lasts just 1.2 years before it wears down so much that it's not even usable and has to be printed again. This way we have to cut so many trees just to make money and this contributes to destroying the environment. We have to get rid of Paper money, whether we do it now by choice or later with compulsion. Later on, we will see alternatives to Paper money, And what we are doing to solve this problem.

## Effects on Wildlife

Furthermore, humans are spreading so much waste that it is causing issues for everyone. Many animals die every year because they eat plastic bags by mistake. Also, plastic waste causes bag impact on our environment in general. Good thing is that we are now trying to limit the use of plastic. For now, the movement might not be on such a large scale but now people are getting more aware of this issue by every single day. It sure is a step in the right direction and we must keep moving in that direction. That way, we will be able to save many lives without even knowing, and also, the world would be a safer place. The issue with plastic is that it decomposes at a very slow pace.

*The main impact of global warming on wildlife is that it disturbs the habitats, which affects the ecosystem. Animals adapted to live in their habitats over the course of centuries or we can say even more than that. Wildlife cannot transform as fast as the climate is changing right now, which reduces their ability to survive as a species. Habitat disruptions are often due to temperature changes and the availability of water, which affects the native vegetation and all the animals that feed on it.*

Affected animal populations can also move into new areas and continue their journey sometimes. But as the human population has grown so quickly it has caused many land areas that might be suitable for such "refugee wildlife" to be already cluttered with residential and industrial development. Cities and roads can act as obstacles, which prevents plants and animals from moving into different habitats.

Beyond habitat displacement, many scientists believe that global warming is causing to shift in the timing of many natural cyclical events in the lives of animals. The study of these events is known as phenology. Many birds have altered the timing of migratory and some birds have changed the time of their mating routines to sync up with the

warming climate in a better way. And some animals are ending their slumbers earlier each year, this is probably due to the warmer spring temperatures we are getting now. To make this even worse, research contradicts the long-held hypothesis that different species that coexist in particular ecosystems respond to global warming as a single entity. Instead, different species are responding in dissimilar ways no matter if they are within the same habitat or different. This truly is alarming and something to be concerned about.

## Prevention

Okay, so we know what are we doing wrong and how is it affecting the world, then the question that arises in a person's mind is that how can we prevent all this from happening in the first place. And moving forward, we are going to have a look at exactly what we should do.

Firstly, we should limit our use of vehicles and especially vehicles that run on Gas. Alternatively, we can use public transport. Also, the technology of electric cars has made a revolutionary impact in our lives and we can use those and that should be a good step in saving the climate/environment. But the best way of transportation will be by walking or by cycling.

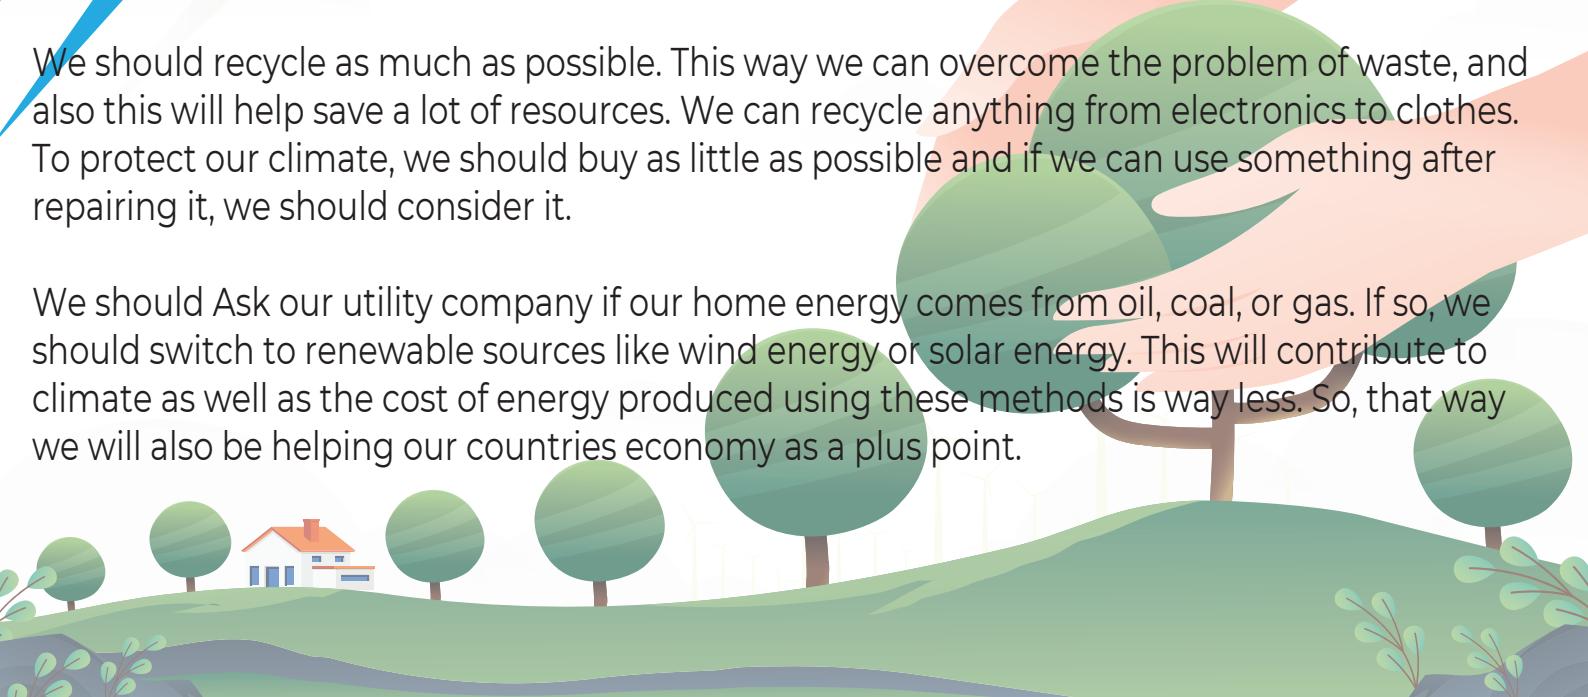

Eating healthy food like vegetables can also contribute to making the world a better place. While meat and dairy products have their importance, but we should not be consuming only these as this can be very bad for our health and atmosphere.

We should not travel when not needed. Airplanes cause to emit a large number of dangerous gases and contribute to the greenhouse effect. This causes the temperature to rise and has a negative effect on the ozone layer.

We should not throw waste material; this will prevent many coincidences like animal causalities and also waste material emits dangerous gases and this can be prevented as well. So, we should use all the what we buy and if we can not use something, we should compost the leftovers.

We should recycle as much as possible. This way we can overcome the problem of waste, and also this will help save a lot of resources. We can recycle anything from electronics to clothes. To protect our climate, we should buy as little as possible and if we can use something after repairing it, we should consider it.

We should Ask our utility company if our home energy comes from oil, coal, or gas. If so, we should switch to renewable sources like wind energy or solar energy. This will contribute to climate as well as the cost of energy produced using these methods is way less. So, that way we will also be helping our countries economy as a plus point.

We should use eco-friendly products, everything we spend our money on affects the planet whether it is in a good way or bad. We have the power to choose which type of things we support. To reduce your environmental impact, we should buy local and seasonal foods, and choose products from companies that use resources responsibly and do not emit gases to a dangerous level.

We should stop cutting forests and start planting more trees, we should help the organizations who are already working on this issue and also play our part in solving this big problem by planting some plants. We can use technology for exams. That way we will be able to save a lot of paper and that way many trees will be saved. On top of it, we will be able to solve a lot of funds in the long run and the record will be much more secure as well. Talk about a win-win situation.

We should make sure that we use the best material possible when it comes to the industrial sector and follows the instructions of the government and other local and international authorities. That way the rate at which air pollution we are spreading can be brought way lower. Also, this will help in building up the reputation of the industry as well as this way the products built will be of better quality, as the best raw material will be used.

On top of that, we should also restrain others from getting the environment spoiled. If we see that someone is causing to get the atmosphere to be polluted, we should speak up and educate them that this is not what we should be doing. We should provide them with alternatives which are good for everyone

You can support us in our mission, that way you would be contributing to making this world a better place for us and our next generations. We are working on this issue for quite some time now because we understand our responsibility and now everyone should. If everyone does their part, it will not be a very difficult thing to get everything sorted. All that is needed is a strong foundation and determination to make things happen and everything is achievable. We have the determination to make this world pollution-free, and control issues like global warming, so, giving your support to such an organization might be the best decision of your life.

# STOP GLOBAL WARMING

## Our Input

We have been working on issues like global warming/Plastic waste/Carbon footprint for quite some time now. We have put our efforts into cleaning streets, beaches and so on. We have personally changed the power supply mode from using oil and coal to using renewable resources for a large area. We have planted plants so that we can reduce the level of CO<sub>2</sub> in the atmosphere. But we aren't finished yet as we are putting all our efforts to make this world a better place.

## Solving Paper Money Issue:

The best solution for Paper money is undoubtedly cryptocurrencies. Everyone knows that crypto is the future of finance and we have to go Digital now or later. So, we are looking forward to issuing crypto. Here are some details regarding it.

Wild Angry Birds is the world's very first environmental care crypto 100% given to the public. Its high security and efficient transaction make it very special and trustworthy. It is a new & improved, advanced cryptocurrency where 100% of all the coins created circulate within its network. And, the presale of its coins brings with it its reward.

Wild Angry Birds is an organization registered with the government and it is looking to do charity work for the world. It is working to minimize global warming, get the issues of the greenhouse effect resolved, and get this planet clean by getting the plastic waste recycled.

To get its Mission of making the planet Green again, Angry wild Birds is going to issue cryptos step by step. Following are the details of the crypto.

## Our Upcoming Crypto !

### Wildangrybirds Network Angry Red (BSC + ETH) Bridge

So, what is Angry red! Angry Red is the shout of a Red Robin the friendliest wild bird of all time spotted worldwide. But sadly, the population of these beautiful birds is getting low and low because of human activities. It's time we understand that we need to keep such beautiful species safe from extinction. This crypto will always be a symbol for it.

- ★ Total Supply 1000,000,000,000,000
- ★ Fees 10% Tax
- ★ 4% Holder interest
- ★ 4% liquidity pool
- ★ 2% towards Green world& Development
- ★ 100% public supply

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Angry Biggy. ( BSC + ETH ) Bridge)

What is angry Biggy! It is a tribute to all the big birds like ostrich, cassowary, and Emu. More and more birds are getting haunted each day and this is not a good this for the population of birds, many species of birds are on the verge of extinction due to human activities. This crypto will represent all the big birds and will make everyone remember their importance.

- ★ Total supply 500,000,000,000,000
- ★ Fees 10% Tax
- ★ 3%
- ★ 3%
- ★ 4%
- ★ 100% public supply

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Angry MAMA ( BSC + ETH ) Bridge)

Now, What is ANGRY MAMA! The answer is, it represents all the icy birds (birds that live in icy areas). We all know how cute penguins are. But they are not alone in the era of ice. There are many other cool birds as well, like Albatrosses, Cormorants, and Swans. These birds deserve some recognition as well. So why not do so by having crypto that represents them?

- ★ Total Supply 250,000,000,000,000(250 T)
- ★ Fees 12%
- ★ 4% Reward
- ★ 4% Liquidity
- ★ 2% Charity
- ★ 2% Development + NFT

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Master Blaster ( BSC+ETH ) bridge)

What is Master Blaster! which is a support to all of the middle of the ring. Master blaster is about setting the bar high, no compromises there. We all know that what humans have been doing to these lovely creatures so why not give them some support. Well, this is our way of supporting them so that everyone can remember them.

- ★ Total supply 500,000,000,000,000 (500T)
- ★ Fees 15%
- ★ 4% Rewards
- ★ 4% Liquidity
- ★ 4% Charity
- ★ 3% Development + NFT

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Angry Blues (BSC + ETH ) bridge)

What is Angry Blues! This is a memory of the cutest birds "Mountain Bluebirds" and other small birds. We all admire these heavenly creatures and love them, right? Then why not take some initiatives for saving their lives as well?

Angry Blues is proof that we love these birds and will try our best to

- ★ Total Supply 420,000,000,000,000,000 (420,000 T)
- ★ Fees (15%)
- ★ 4% Rewards
- ★ 4% Liquidity
- ★ 4% Charity
- ★ 3% Development + NFT

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## BTC / Solana network BTC / Solana ( Bull Dot )

What is Golden eagle! It is an evocation to the great golden eagle. These brave species of birds prey and get along, they represent strength, and to appreciate their strength we are dedicating our work and time to make crypto after their name. We can see the style and charm of this crypto, can't you? save them

- ★ Total Supply 1,000,000,000,000 (1T)
- ★ Fees (15%)
- ★ 4% Rewards
- ★ 4% Liquidity
- ★ 4% Charity
- ★ 3% Development + NFT

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Erc Ethurium network ERC Token / Duranium or Sky Gold or Golden Eagle

What is Golden eagle! It is an evocation to the great golden eagle. These brave species of birds prey and get along, they represent strength, and to appreciate their strength we are dedicating our work and time to make crypto after their name. We can see the style and charm of this crypto, can't you?

- ★ Total Supply 5,000,000,000,000 (5T)
- ★ Fees (15%)
- ★ 4% Rewards
- ★ 4% Liquidity
- ★ 4% Charity
- ★ 3% Development + NFT

NFT : Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## NFT:

Our NFT is very unique and looking to adopt metaverse. Our NFT will be very different than anyone else because our collections taken via professional photographers and are the most rarest wild life photographs that sold via our platforms. This will create a new gate for all talented photographers worldwide.

## Claim your free Crypto!

The method is very simple

1. Find the wildangrybirds camera app!
2. Plant a tree and take a photo
3. Share this with your friends or groups
4. Send screenshots in telegram with your wallet address It's easy!

## Wildangrybirds Camera app

Guess what! We got you with a camera app as well.

What are you waiting for? Just go to the google play store and download the app.

But the work is not over yet, after downloading the app, plant a tree or collect waste plastics and dispose of them while taking photos via our app share this image with 3 groups and send us the screenshots via email or telegram with your wallet address to receive free WAB Crypto straight to your account. So hurry and grab your crypto by downloading the Wildangrybird Camera app.

<https://youtu.be/18eH09GWmmA>

We have multiple websites and multiple teams working for this Missions!
